

# Lists problem set 1

Note that the questions in this assignment all build on each other and a later question may depend on a previous one.

1. Write the code to declare a variable named `numbers` which is an empty list.
2. Write the code to declare a variable named `numbers` which is a list with the numbers from 1 through 10.
3. Write the code to access the second item in the `numbers` list.
4. Write the code to add the number `20` to the `numbers` list.
